THE WHALE MONKEY ($TWM) OFFICIAL EXPLANATION

1■■ WHAT IS TWM?

The team started TWM because we are absolutely sick and tired of projects being launched every single day that promise everything but deliver nothing. Yes, they do one thing: they steal money from gullible investors. I hate scammers down to my very core. That is why TWM is 100% transparent. Everything can be verified on-chain and every single question is answered directly. TWM started as a memecoin, but as far as we have come now, we are way past the meme phase. We are building a real software empire under our official entity, TWM Ecosystem Technologies FZCO.

2■■ WHAT DOES TWM HAVE AND WHAT IS TWM STILL GETTING?

We do not sell hot air. This is what is already running or will be rolled out over the coming months:

- **Staking Function:** Dynamic baseline yield, guaranteed and paid out liquid every single week!
- **Mobile App:** Fully operational for Android.
- **TWM Launchpad:** The ultimate B2B infrastructure that external parties buy from us.
- **Webshop:** High-end TWM merchandise.
- **The Own TWM Network:** Our own, independent Layer-1 Blockchain.
- **The TWM Stablecoin:** Our own centralized stablecoin for our network.

3■■ WHERE IS TWM GOING IN THE NEXT 5 YEARS?

Our holding roadmap stands like a fortress built of solid concrete:

Years 1 to 3: We launch and optimize all the software products mentioned above. We use the revenues to aggressively burn the token supply back down through hard burns, and we will list on multiple Tier-2 exchanges.

Years 4 and 5: We smash our way to the absolute global top with listings on at least two Tier-1 exchanges (the absolute billion-dollar radars). We officially launch our own TWM

NETWORK, deploy our own TWM Stablecoin, and permanently remove the staking token emissions through an automated On-Chain Kill Switch.

The Price Projection: We calculate that the token will sit around the $1.00 dollar mark right before the transition to our own network. Once we enter our own blockchain, the scarcity becomes absolute and the price will shoot up even harder towards our 1 Billion Dollar Market Cap.

4■■ TOTAL TOKEN BURNING (THE COMBUSTION)

TWM is going to burn a massive total of 450 million tokens from our 1,000,000,000 genesis supply. But listen closely: we are not going to burn dead, worthless tokens; we are burning tokens that have been bought out of the pool with REAL MONEY or cleared through unutilized ecosystem reserves!

The CLMM Pool-Fees: Every week we collect the transaction fees from our Raydium V3 CLMM pool. 25% of all global CLMM transaction fees are distributed in pure SOL straight to our Elite Members, while excess TWM tokens from the pool are systematically destroyed (burned).

The 200M Marketing Vesting Burn: The entire marketing allocation is locked in a 24-month linear vesting contract. Every two weeks, 3.83 million tokens are unlocked and immediately sent straight to the burn address. 200,000,000 tokens will be completely turned to ash outside the market!

The Launchpad B2B Revenue: Everything that external parties buy on our Launchpad must be paid for in TWM. Does a developer buy a software package for $10,000? Then they must first buy $10,000 worth of TWM from the pool (Price rises!). As soon as we receive that $10,000 in TWM, we split it like this:

- 25% ➡■ Straight to the TWM Treasury.
- 37.5% ➡■ IMMEDIATELY and permanently burned (Price rises again!).
- 37.5% ➡■ Distributed in pure Solana to our Elite Members!

The Webshop: Someone buys merchandise for $100 and is forced to pay in TWM tokens. As soon as the payment is received, those tokens are immediately 100% burned.

The LP Fee-Burn Cap: We will burn a strict maximum of 50,000,000 tokens out of the liquidity fees over the years to ensure the Raydium pool remains fully liquid and mathematically healthy.

In this brutal, mathematical way, we bring the total supply down to an ultra-scarce 550,000,000 tokens.

5■■ WHY DOES TWM WORK WITH ELITE MEMBERS?

TWM works with Elite Members so that they become the unshakeable, sovereign foundation of our project. To enforce absolute long-term price stability, the Elite Protocol is strictly limited to a hard cap of exactly 125 slots worldwide. To claim your Elite status, you must deposit exactly 2,000,000 $TWM tokens into an immutable 5-Year (60 Months) HARD-LOCK smart contract. Because you lay the floor and lock up 250 million tokens total, you completely erase selling pressure from early holders.

In return, you hold the Master Key: you bypass all ecosystem tiers, get free access to all platform utilities, and receive pure Solana ($SOL) dividends paid directly out of 25% of all global CLMM fees and 37.5% of all Launchpad revenue every single Friday afternoon!

6■■ WHY IS TWM SELF-SUSTAINING (NO MARKET IMPACT)?

TWM is and will become completely self-sustaining because we push the price up ourselves through burns with external capital. The Launchpad sells real software infrastructure, and all revenue streams are funneled straight back into TWM. With every single purchase that must be done in TWM, the price rises on-chain. It becomes a perfect, closed economic circle that is made unbreakably tight at the end. We have absolutely nothing to do with the rest of the crypto market!

7■■ THE B2B LAUNCHPAD UTILITY

The Launchpad: The ultimate B2B money press of the holding. Elite Members get automatic free access and guaranteed early-stage allocations for every sub-project debuting on our infrastructure. The ecosystem operates as a premium incubator providing maximum security and utility on the Solana blockchain.
